Meet Thakur

Bengaluru, India | +91 97600 60211 | meet11india@gmail.com | linkedin.com/in/MeetThakur | github.com/MeetThakur | meeeet.dev

Summary

Computer Science undergraduate (CGPA 9.12/10) with production software engineering experience at Eightfold AI, building LLM-powered systems, data pipelines, and secure enterprise applications. Experienced in backend engineering, full-stack development, API integration, database systems, and cross-platform mobile applications. Strong algorithmic fundamentals (Codeforces Expert, LeetCode Knight, CodeChef 4-star) with independently developed software serving 2,000+ users.

Experience

Engineering Intern | Eightfold AI | Bengaluru, India | Aug 2026 - Present

- Designed and deployed an LLM-powered support ticket routing system recommending ownership across 42 engineering teams, achieving **93% top-3 accuracy** (557/598) on held-out data versus 43% for the legacy ML classifier; validated 92.5% accuracy on a second evaluation period.
- Ran **60+ experiments across 47,000+ historical tickets**, evaluating classifiers, embeddings, and prompt strategies; eliminated five unnecessary components through ablation testing. Deployed via Airflow every 15 minutes with automatic fallback, a kill switch, and weekly accuracy monitoring; recorded zero LLM errors across 46 first-week tickets.
- Independently designed and developed an in-house Salesforce backup and restore pipeline using Databricks snapshots to replace a licensed third-party solution, reverse-engineering vendor workflows and implementing configurable object and field mappings.
- Engineered dependency-aware restoration to preserve parent-child record relationships, with Salesforce API batching, rate-limit handling, retry mechanisms, and resumable recovery from partial failures without duplicating records.
- Designed and deployed an enterprise Slack-based HR assistant providing cited, country-aware LLM policy answers, identity-verified employee data access, and consent-based Jira ticket escalation; built an authenticated dashboard for analytics, broadcasts, polls, and scheduled check-ins.
- Secured sensitive employee data using AES-256-GCM envelope encryption with cloud KMS, least-privilege PostgreSQL roles, and audit logging. Implemented isolated development, test, and production environments, Airflow-scheduled jobs, automated testing, approval-gated deployments, and rollback.

Projects

Krono: Competitive Programming Tracker | React Native, Expo, TypeScript, Zustand, SQLite

- Built a cross-platform application aggregating live contest schedules and profiles from four third-party APIs (Codeforces, LeetCode, AtCoder, CodeChef), with error handling, retries, and timezone-adjusted views.
- Designed SQLite schemas and migration queries for persistent storage of profiles, rivals, and contest history; shipped six application versions featuring rival leaderboards, background rating synchronization, and push reminders. Repo: github.com/MeetThakur/Krono

ConvoMetrics: Chat Analytics Platform | Python, Pandas, Streamlit, Plotly, NLTK

- Built a data processing pipeline parsing Telegram JSON and WhatsApp TXT exports into structured Pandas DataFrames to analyze messaging patterns, participant activity, response trends, and emoji usage.
- Implemented NLP-based word analysis, stopword filtering, interactive visualizations, and Streamlit caching; reached **2,000+ users, 65 GitHub stars, and 14 forks**. Repo: github.com/MeetThakur/ConvoMetrics

Playdeck: Real-Time Multiplayer Gaming Platform | TypeScript, Node.js, React, Socket.IO, Zod

- Engineered a real-time multiplayer platform hosting three browser games, using WebSockets, server-authoritative state machines, shared event schemas, and room-based sessions to synchronize gameplay across connected clients.
- Implemented reconnection recovery, server-side move validation, timers, rate limiting, and privacy-filtered game states; developed Vitest unit tests and Socket.IO integration tests covering gameplay, disconnections, and network failures. Repo: github.com/MeetThakur/blindspot

KhetSetu: AI-Powered Agricultural Platform | React, TypeScript, Node.js, Express, MongoDB

- Developed a full-stack agricultural advisory application with a React frontend, REST APIs, MongoDB/Mongoose data models, JWT authentication, and farm management functionality.
- Integrated Gemini 2.5 Flash for crop advisory, pest identification, and soil analysis, alongside weather and market data integrations; deployed the frontend on Vercel and backend on Render. Repo: github.com/MeetThakur/Khetsetu

Technical Skills

Languages: Python, TypeScript, JavaScript, Kotlin, C, C++, SQL

Backend and Databases: Node.js, Express, REST APIs, Socket.IO, WebSockets, PostgreSQL, MongoDB, MySQL, SQLite, Databricks, Salesforce APIs

Frameworks and Libraries: React, React Native, Expo, Zustand, Pandas, NumPy, Streamlit, Plotly, Scikit-learn, Apache Airflow

Tools and Practices: Git, GitHub, Pull Requests, Code Review, Unit Testing, Integration Testing, Vitest, Object-Oriented Programming, ETL, Linux, Vercel, Render

Education

B.Tech, Computer Science and Business Systems | Noida Institute of Engineering and Technology | 2023 - 2027

CGPA: 9.12/10 | Coursework: Data Structures and Algorithms, DBMS, Operating Systems, Computer Networks, OOP

Achievements

Competitive Programming: Expert on Codeforces, Knight on LeetCode (Top 4%), 4-star on CodeChef.

Research and Hackathons: Research papers presented at Shiv Nadar University and PSIT Kanpur; Smart India Hackathon 2024 and 2025.

Certifications

Network Security, Cisco | Algorithmic Thinking Part 1 and Part 2, Coursera
